აღწერა:	The most powerful in its class: 31 l dehumidifier + HEPA air cleaner with 95 % efficiency to protect against mould, bacteria, viruses, dust, pollen and allergens 90 m² / 230 m³ Room size up to 4 l Tank capacity 31 l/24h Dehumidification capacity Clothes drying function Operating control light Air Quality Display Display of the set humidity level Child safety lock Product Description Maximum dehumidification and drying with 95%

HEPA air purification

When moisture in the private living environment, garage, or workplace becomes a health problem, the TTK 99 HEPA dehumidifier reliably and permanently ensures a healthy indoor climate. Thanks to its unrivalled high dehumidification capacity of up to 31 litres/day in this device class, the mobile dehumidifier is suitable for room sizes up to 90 m² or 230 m³. Even drying out damp masonry, for example after heavy rain or flooding, is effortlessly handled by this compact powerhouse with its high air volume of 170 m³/h – putting it on par with classic construction dryers. Visually, the TTK 99 HEPA impresses with its modern design, a black-trimmed control panel, and recessed handles in the housing for quick relocation.

Outstanding design, impressive dehumidification performance

As unique as the product design are the internal features of the TTK 99 HEPA, which combines two technologies for improving indoor air quality. In dehumidification mode, the 2-in-1 dehumidifier regulates the humidity to your desired level with a freely selectable target value between 30% and 80%. Furthermore, the air is purified by a dual filter system consisting of a pre-filter and HEPA filter, removing 95% of pathogens such as viruses, bacteria, and mould spores, as well as pollen, household/fine dust, allergens, and other airborne particles.

An important contribution to healthier living and working – a noticeable relief especially for allergy sufferers and people with house dust allergies.

Strong in use where moisture becomes a problem

The hygrostat-controlled dehumidification automation with target humidity selection (30% to 80%), digital air-quality sensors, four operating modes including laundry drying function and continuous operation, a quiet night mode, and a

two-stage fan guarantee reliable dehumidification and purification of indoor air. An overflow protection ensures the device switches off as soon as the maximum fill level of the 4-litre water tank is reached. Additional comfort is provided by the hose connection for convenient condensate drainage via the hose already included in the scope of delivery. Practical is the modern colour LED display which shows the air quality status in three colours (blue, green, red). An illuminated segment display in the LED screen provides precise percentage information on current humidity, preset target humidity, temperature, and remaining operating hours with the activated 24-hour timer for timed switching.
